Option 4 - Hydrocarbons

## Absorbent pads, rolls, booms and pillows

We offer a wide range of products to clean and soak up spills and leaks around the workplace. Our absorbent rolls are perforated to pad size, allowing you to use only what you need. Booms and pillows are used to absorb leaks too large for a pad, and are ideal for plant maintenance and leaky machines. We can provide absorbent solutions to fit any budget and space.

## Choosing the right absorbent

Have you noticed how absorbents come in grey, while others are yellow or green? Here's what you need to know.

**GENERAL PURPOSE ABSORBENTS** are grey and sometimes referred to as Universal spill kits. As a rule of thumb if it is an indoor spill, use a grey product to absorb both oil and water based substances (technically referred to as hydrophilic). Best choice for most situations.

**HAZCHEM ABSORBENTS CHEMICAL** are for chemical and toxic spills as these utilise polypropylene meltblown absorbents. These are usually in yellow and referred to as Hazchem. Remember that chemical spills can be extremely hazardous and should not be handled without proper training or protective equipment. These absorbents can be used indoors and outdoors.

For more information call **Cleanaway** on **13 13 39** and dial **4** for Hydrocarbons.

## Spill kits

Cleanaway has a comprehensive range of spill kits. We can also custom design a spill kit to suit your needs. Spill kits are available as Vehicle Kits, General Purpose and Hazchem.

HAZCHEM SPILL KIT

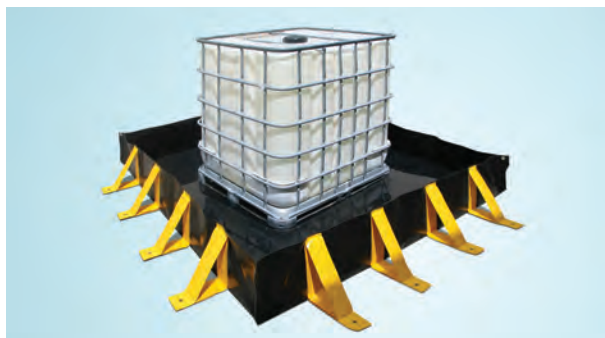

# Loose absorbents

## Spill Eater

Spill Eater is manufactured locally from recycled organic cellulose. This contains naturally occurring microbes that consume hydrocarbon material. It absorbs up to 4 times per kg than most clay and mineral absorbents and is effective in rainy weather.

## Vulcan Industrial Absorbent

This mineral sponge absorbs immediately upon contact and is effective on most spill types including hazardous chemicals, fuel and inks. Consisting of granular zeolite, it is perfect for outdoor applications.

## Collapsible bunds

Our bunds unpack quickly for emergency situations and can be stored in small spaces. The drive-through design is ideal for small equipment decon, saddle tank ruptures and transformer storage with no parts to assemble or disassemble. Collapsible bunds are reusable. Just clean and place in the storage bag.

## Spill pallets and overpack drums

We have a complete range of spill pallets, drum spill pallets and overpack drums to ensure the workplace is compliant in case of spills and leaks.

- All polyethylene construction
- Excellent chemical resistance and will not rust or corrode
- Spill pallets have access for forklift
- Spill pallets and overpacks are available in different sizes

# Drive over wall bunds

## Drive over bund

The wall bund is designed to contain and prevent liquids from leaving its containment area. It is used primarily as a wall with a footprint of 14cm wide by 7.5cm high. The wall bund has a half-moon collapsible sponge encased in a strong yellow truck tarp vinyl material. This provides a watertight, nonslip surface and a round footprint to walk on or drive over.

## Stick down bunding

Our stick down bunding has been designed to prevent a spill from migrating into the yard from your shed. It has a bevelled edge on either side and a flat top surface which allows a forklift unrestricted movement. It is glued on one side ready for you to stick down.

## Stormwater protection

### Drain wardens

Our drain wardens operate in a similar fashion to a gross pollutant trap. It traps particulates larger than the fabric's pore size while absorbing hydrocarbons via the boom suspended beneath the grate. Drain wardens also have overflow pockets to facilitate large volume flows.

### Drain cover/protector

Our drain covers and protectors are flexible, durable, non-absorbing and tear-resistant. These can be easily cut into special shapes and sizes to fit your needs and are resistant to oil, water and most aggressive chemicals. All you need is soap and water to clean your drain protector.

## Showers and eyewash

Our range of showers and eyewash are stainless steel construction for long service life in all environments. They comply with AS4775 and ANSI Z358 for emergency eyewash and shower equipment. We supply different models to suit any application.

## Storage cabinets

We offer a range of storage containers, including purpose-built storage for flammable liquids, corrosive substances, aerosols, gas cylinders and more. Storage cabinets can be locked and come in a variety of sizes.
